

Coconino County Courthouse Upgrades Security with IQeye

Courthouse bailiffs now have the tools needed to more effectively manage security

May 22 2007

Birmingham, UK and San Clemente, CA—IQinVision, market leader in high performance megapixel network cameras, smart IP cameras, and network video recording systems, today announced that the Superior Court of Arizona in Coconino County, located in Flagstaff, has upgraded courthouse security by deploying IQeye megapixel cameras, managed by an OnSSI network video recording system. IPVision is the systems integrator, design and engineering firm managing the security system installation.

The Coconino County facility and its staff of bailiffs oversee access to the building and courtrooms and they must focus on preventing weapons of any kind reaching the interior of the building. In light of past shootings in courtrooms and a pattern of threats against judges around the country, such security is a matter of life and death.

To meet these challenges the courthouse recently installed a new video surveillance system. 27 IQeye 701 megapixel network cameras were installed at strategic locations in the public access areas of the courthouse. The video feeds back to a central command and control center in the courthouse where it is monitored and recorded by the OnSSI software.

The significantly enhanced surveillance system allows bailiffs to monitor critical areas without the need to physically locate limited personnel in these areas. Staff can now focus on the comprehensive security picture and take on additional duties. Prior to the new system installation, bailiffs spent a considerable part of each day standing in vulnerable areas to monitor traffic and look for any threatening activity.

In just three months of system operation, it's clear that staff productivity and effectiveness will significantly improve. The IQeye cameras were a logical choice said Ben Green of IPVision, "The IQeye megapixel image quality coupled with the network stability of the camera cover two essential needs for this application. To date, we haven't had one service call, the system has been flawless."

"IQeye network cameras are mature, stable products and are fast becoming the standard for critical, high security applications like banks, prisons and courthouses where you can't afford to miss a thing" said Paul Bodell, IQinVision VP of Sales and Marketing.

About IQinVision

IQinVision designs, manufactures and markets high performance, multi-megapixel IP cameras, intelligent video processing platforms and network-video-recording systems. Established in 1998, IQinVision has helped shape the surveillance and industrial video markets as the first to introduce HDTV resolution network security cameras, multi-megapixel IP video systems and multi-user digital pan/tilt/zoom. IQeye network cameras offer superior image quality with high speed, low light and intelligent video options and are used in a wide variety of government and commercial applications. The IQeye can run in stand-alone mode or can be integrated with other systems via our complete Software Developer's Kit and API.

IQinVision is privately held and headquartered in California with regional offices in Pennsylvania and Utrecht, Netherlands. The company's products are available as IQeye-branded, private-labeled and custom OEM models. IQinVision's management is committed to exceeding the expectations of its partners and customers.
